

MEMORY MAPPED INPUT/OUTPUT OPERATIONS

ABSTRACT OF THE DISCLOSURE

A method of performing memory mapped input output operations to an alternate address space comprising: establishing a first instruction directed to a first memory mapped input output alternate address space associated with an adapter to store data in accordance with a definition of a z/Architecture; establishing a second instruction directed to the first memory mapped input output alternate address space associated with an adapter to load data in accordance with the definition(s) of the z/Architecture; and wherein a process issues at least one of the first instruction and the second instruction and thereby causes execution of at least one of the store and load with the first alternate address space.
